## Protect your Home

The Infinite system was designed to protect your home. The fact that it is a wireless system means that installation of the system will require little or no disruption to the décor of your home. No wiring is required to link the sensors to the control unit, and so the installation will be quick, painless and cheaper than the installation of a similar wired system.

## Protect your Office/Shop

The Infinite system is also particularly suited for use in your office or shop—especially where the premises are completely locked up overnight and over the weekends. The Infinite system will provide the necessary peace of mind that your property is safe, and as an added bonus, it can even inform you about when your office/shop was opened and closed each day. The “bell” function of the system can also be activated so you always know when a customer is entering your shop/office.

## Protect against Fire

The Infinite system is not just a burglar alarm; it can also protect your home or office against fire. Addition of the wireless smoke detector, transforms the Infinite system into a fire alarm that works 24hrs a day, whether or not you are in or around the premises. Thanks to the GSM communication capability, you will know if there is a fire in your home or office before the smoke or fire can be seen outside the building—even if you are miles away!!

## Installation

Our consultants/installers are available to survey the premises to be secured, and provide expert advice on the equipment required, as well as on the optimum location of the sensors and control panel.

- Entry/Exit delays and Arm/Disarm tones
- Built-in LCD display with user-friendly menu
- SMS monitoring (with your mobile phone)
- Built-in sounder

*The Infinite Control Panel*

## Sensors

### PIR

Detects a presence in the secured room

### Magnetic Switch

Detects opening/closing of door or window

### Smoke Detector

Detects fire in premises at an early stage

### Panic Alarm

Activates the alarm immediately (and sends message to monitoring phones)

## Other Equipment

### Keyfob

Used to remotely arm/disarm the system

### External Sounder

Optional additional external sounder

### Remote Keypad

Additional keypad (for large premises)

## Starter Package

The starter package contains the control panel with the built-in sounder and GSM communicator, as well as one PIR and one Magnetic switch. It can therefore secure one door/window and one large room. This package would be suitable for a shop or small office. It can also be used as the first phase of a multi-phased installation at a home or larger shop/office.

## Bonus Package

The bonus package also contains the control panel with the built-in sounder and GSM communicator. It however features three PIRs and two Magnetic switches. It can therefore secure two doors/windows (e.g. front door and back door) and three large rooms. This package would be suitable for an average size house or a large shop/office.

## Value Accessory Pack

The value pack contains three PIRs, two Magnetic switches, as well as an external sounder and a panic button. It is to be purchased together with a Bonus or Starter pack, to extend the coverage of the system.

## Packages

The items above have been grouped into special packages that match the most common requirements. Additional sensors and equipment can however be added to any of the package at time of purchase or at anytime in the future.

Every installation must however include the Infinite control panel, and this is only sold as part of the starter or bonus package. To expand the system however, You can add individual items or purchase the value accessory pack.
